SwingTIP

SwingTIP is a sports tech device aimed at helping improve your golf swing. The tiny 3D Bluetooth sensor device attaches to any golf club and transmits real-time swing analysis to your smartphone or tablet. SwingTIP reproduces a 3D animation of your swing alongside key performance metrics and activates your mobile device to auto-video record your swing to show you what happened with your swing, why it happened and how to fix it. SwingTIP pinpoints flaws in your swing plane, path, power and impact aspects, and provides instruction tips and practice drills from renowned coaches. SwingTIP worked with golf pros to help provide real life critiques. Visit www.SwingTIP.com for more info.
